- github.com/wojciechkubiak

## EDUCATION

### Engineer

UWr, Applied Computer Science  
2016 – until now

### Building Technician

CKZiU in Strzelin, Building  
2010 - 2014

## SKILLS

- ReactJS / Redux
- Flutter
- JavaScript / TypeScript
- NodeJS (Basic REST API)
- SQL / T-SQL
- Html & Css / Sass
- Basic Python
- Linux / Windows

## ABOUT ME

I'm a Flutter / Frontend Developer and a 4th year student of Applied Computer Science and Measuring Systems at the University of Wrocław actually working at the xBerry R&D. I am passionate about creating nice looking web and mobile applications using modern technologies like Flutter and ReactJS. I got into it while working on numerous individual, commercial and university projects. In each of them I showed creativity, consistency and attention to the quality of the application and code. During my studies and full time work, I also learned how to work in the SCRUM system, how to communicate with client while receiving an application creation order and how to program with modern standards

## WORK

### XBERRY R&D

#### Flutter / Frontend Developer

02.2021 - now

##### Flutter

- I was working on app logic, views, implementation and modification of external packages..
- I was implementing BLoC architecture and was responsible for tests.
- Created services and offline of the application, including storage.

##### React/Redux/NextJS/Typescript

- Implementation of improvements, including application flow refactor – everything while using Typescript.
- Handling communication between server and application
- Created website using NextJS framework

### ACN

#### Application Support Specialist

10.2020 – 02.2021

- Created a script in NodeJS that generates reports in PDF format from an XML file.
- Maintaining the automation scripts created by my as IT Intern and adding the new ones (using modern JavaScript and occasionally Python).
- Made ElectronJS, NodeJS and MSSQL application that allows user to reduce time spend on sorting and getting informations from xlsx files from 30 minutes to 30 seconds.
- Added new options to an already created by me panel.
- Created a script that sends notifies – SMS – to the clients.

### IT Intern

7.2020 – 10.2020

- Created an automation scripts for billing department using JavaScript and MySQL
- Built a web application consisting of frontend made with ReactJS and API made with NodeJS, ExpressJS, OAuth, Sequelize and Raw SQL Queries.

## MORE

---

**English**  
B2-II

**Polish**  
Native

## HOBBIES

---

- Programming
- Football (Tottenham Hotspur)
- Drawing
- Computer games

## INTERNSHIPS / PRACTICES

---

### Database programmer

**Centre of Biomedical Research**

10.2018 - 02.2019

Creating a web application for storing and modifying data from the Centre of Biomedical Research (including future automation).

During the internship I've learned **React Hooks, authorization** and how to work with **multiple external libraries**. *This application is continued my engineering project.*

### Apprentice

**OAK Fusion**

10.2018 - 02.2019

Creating a Super Star Trek game in **Java**.

The main assumption of the project was to write clear, working and manually tested code.

The whole thing took place in the **SCRUM** system simulated by the company owner. In addition, during the practices I learned how to use **JIRA** and IntelliJ IDEA.

## PROJECTS

---

### Meditate

**Mobile application**

(Work) Application that supports user wellbeing through multiple exercises and by creating statistics that can be later used to check your progress..

- Flutter

### FitTracker

**Mobile application**

Application that allows user to easily add entries about his health, which can be read by the carer to whom he is assigned.

- Android / Java
- Node.js / Express.js
- PostgreSQL

### Energe

**Web application**

Website for dutch renovating company that takes clients data, counts new usage based on company calculations and sends them to the company through ZOHO CRM.

- ReactJS
- Node.js / Express.js

## PROJECTS

---

### **Acare**

#### ***Web application***

(My current personal project) Website that allows pet shops and private users to store data (like water, food, weight) about their loved ones.

- NextJS / TypeScript
- NodeJS / Prisma
- PostgreSQL

### **Single Bot**

#### ***Web application***

Interactive chat with both / consultant answering to customers questions.

- ReactJS

### **Premium on the Go**

#### ***Web application***

Website that takes users destination, number of passengers, luggage, dates and gives them possible transport options which they choose to receive voucher.

- ReactJS / Context API

### **CopySearcher**

#### ***Web application***

Application that takes image or article URL given by user and checks if there is any plagiarism. Later user can compare both original and plagiarism and report it.

- ReactJS / Typescript
- Redux / ContextAPI
- Material-UI

### **Obb-sys**

#### ***Web application***

An engineering application for the Biomedical Research Centre, allowing for modern data storage and management from the website level.

- React.js
- Node.js / Express.js
- Sequelize / PostgreSQL

### **Opqn web**

#### ***Web application***

Application that allows user to easily add entries about his health, which can be read by the carer to whom he is assigned.

- React.js
- Node.js / Express.js
- Sequelize / PostgreSQL
